

# Curriculum & Pacing Guide

## Physics

Martinsville City Public Schools

Revised Summer 2011 by Teresa Davis

## Martinsville City Public Schools' Instructional Plan of Action

The Curriculum Guides represent **Martinsville City Public Schools' Curriculum**, which is based on the *Standards of Learning for Virginia Public School* and the **State Curriculum Framework**. In order for curriculum to be effective, it must be composed of three important components: written curriculum, taught curriculum, and assessed curriculum. Each of these components must be aligned to ensure learning at its highest level. The Curriculum Guides are a starting point in this process.

**The Written Curriculum:** The written curriculum consists of the **Curriculum Guide** used in conjunction with the **State Curriculum Frameworks**. The Curriculum Guide provides information on which standards are taught during a given grading period, the essential vocabulary for direct instruction in that standard, the understandings students should gain from instruction in the standard, and the expected student outcomes for this standard. The next step in this process is to study the Curriculum Framework for the identified standard. The Curriculum Framework provides instructional details for how instruction on this standard should look in the classroom.

**The Taught Curriculum:** The Curriculum Framework helps the teacher “unpack” the written curriculum for aligned “taught curriculum.” It does this by providing the definitions to use in direct vocabulary instruction, content details, and details on instructional strategies to use. The instructional strategy details include explanations of specific instructional methodologies and names instructional tools such as manipulatives and graphic organizers. Using the definitions, methodologies, content details, and instructional tools provided by the Curriculum Framework will ensure alignment in between the written, taught curriculum, and assessed curriculum.

**The Assessed Curriculum:** Formative assessment is an integral and ongoing part of the instruction process and occurs on a formal and informal basis at many levels. Teachers use informal assessment throughout the learning to check for student understanding formal common assessments to assess student mastery and plan interventions. Another level of formal assessment is the division benchmark assessment, which has as its primary purpose to help the adults know how to adjust instruction for student success. The final level of assessment is the *Virginia Standards of Learning Tests*, which are based on the *Standards of Learning for Virginia Public Schools* and the **Curriculum Frameworks**. Martinsville City Public Schools provides many tools to assist our teachers and administrators in assessment and disaggregation of assessment data. Teachers have access to tools such as **Tests for Higher Standards**, **ExamView** at grades two through twelve, **PALS** phonological awareness and literacy screening for preK through third grade, **STAR** reading assessment at grades two through twelve, and **Algebra Readiness Diagnostic Tests** for grades five through twelve. Also, teachers have access to **Reports Online Systems** for analyzing data from classroom assessments and benchmark assessments. All of this is an integral part of Martinsville's commitment to “**Learning for all; Whatever it takes.**”
